Exploring Shenandoah Mountain's Natural Heritage:

High Knob Fire Tower

Tyler Gingrich and Caroline Whitlow
James Madison University
As nighttime closes in and the autumn air cools, not even a silhouette of the tree line remains visible along the darkening mountainside. Quietness trumps over the occasional sound of an evening bird or small creatures trampling on fallen brown leaves. The watchman retreats to his cabin and huddles around a Kerosene lamp, as occasional storms provide the only source of natural luminescence with lightning that could jolt a man's nerves straight through. This is the solitude of the vigilant life of a fire tower watchman like Gerald Fawley, who spent his days over 4,000 feet in the air on Shenandoah Mountain.

Gerald Fawley, Class of 1935, had just graduated from Broadway High School in Broadway, VA when he landed a position with the Civilian Conservation Corps. As a Local Enlisted Man (LEM), Fawley completed tasks from working as a typist to delivering lunches for work crews all over the Shenandoah Valley. After the CCC camp closed in 1937, Fawley had no trouble finding a new position. He began working with the United States Forest Service, a federal agency underneath the Department of Agriculture. Henceforth, Fawley’s work centered around the natural development and functional use of the newly renamed George Washington National Forest, known as Shenandoah National Forest from its founding in 1917 to 1932.

Lacking training or experience with explosives, the college-aged man hauled thousands of pounds of dynamite for the men he called "dynamite monkeys" who oversaw CCC road projects. When the fire season rolled around, the Forest Service posted Fawley at a steel lookout tower on the crest of Shenandoah Mountain at Bother Knob. From his metal perch, Fawley watched for potential forest fires and phoned a dispatch station in Bridgewater, VA if smoke or flames arose. He found entertainment in the wildlife of his workplace— turkeys, rabbits, foxes, and grouse passed by and paid him no mind. He cooked on a Sibley stove and warded off loneliness with phone calls to the women at the Bridgewater radio station, one of whom was named Ethel Miller.
and later became his wife. When Bother Knob went out of use due to its obstructed view of the Valley due to tree growth (interestingly, that's how Bother Knob got its name), the Forest Service transferred Fawley to the lookout post on High Knob five miles north of Bother Knob near Brandywine, WV. This former fireman’s lookout post is included in the 90,000-acre Shenandoah Mountain National Scenic Area proposal and warrants protection due to its illustrious history, stunning views, and pertinence to local natural heritage.

Ethel Miller, who worked in Bridgewater as a radio dispatcher to the fire towers and later became Gerald Fawley's wife.

During his first fire season at High Knob, Fawley roomed with Abner Casey, a district forest ranger who lived on nearby private property. The lookout man and the ranger’s family had breakfast together each morning before Fawley made the steep mile-long hike that led to the knoll with a panoramic view of the Virginia-West Virginia border. There, he would shimmy up a tree with wooden slats nailed in. He sat in a makeshift hunter's stand, but unlike the hunters of the forest, lookout men carried no weapons to their solitary mountain posts.

In 1939, planning began for a lookout structure on High Knob. The construction project proved beneficial for postwar employment in the area. Veterans of World War I worked alongside
crews from CCC Camp #2 at North River to build High Knob Fire Tower. They constructed it with native rock from the mountaintop, making it the only stone tower in our region. For maximum visibility, its design included a catwalk and an interior room with windows on each side. Working in the off-season prevented the building project from interfering with lookout duties, and by the 1940 fire season, Gerald Fawley no longer had to do his work from a rickety platform in the limbs of a tree. He instead made himself at home within the stone tower's interior, where he worked for three more seasons before transferring to the post on Cow Knob, which sits on the border of Rockingham County, VA and Pendleton County, WV.

In the late 1960s into the early 70s, the George Washington Forest Service considered the usefulness of fire towers in the area and whether they should be taken down. David Frankel, adjutant of the Veterans of Foreign Wars of the United States Post 632, wrote a letter on September 10th, 1969 to the forest supervisor of George Washington National Forest, Stanford M. Adams, about the VFW Post 632’s opinion on the lack of accessibility to High Knob Fire Tower. At the time, Frankel said that because the road to the tower was built partially on private land, there had
been a locked gate barring access to anyone besides Forest Service members who maintained the tower and the private citizens who owned land along that road. Frankel and the rest of Post 632 requested that the Forest Service open the road to High Knob for public travel. The significance of the tower, to Frankel, came from the fact that the structure was “erected by World War I veterans, stationed at a CCC camp in Augusta County,” and had "potential to be a memorial to those men who served their country with honor.” Not only was Frankel writing to keep the tower open to the public, he also fought for the tower to stay erect, an issue to come up just a few years later.

Despite the illustrious history and beauty of the tower, a call came to remove all the fire towers within the George Washington National Forest, including High Knob, in the early 1970s. On August 28th, 1972, Melvin L. Anhold, Fire Control Staff Officer, wrote to all District Rangers, "Our fire tower detection system is not effective. This came out by analyzing the fire reports. We are proposing to go to a full aerial detection system. Therefore, it will no longer be necessary to maintain or man fire towers. We propose that all fire towers be declared surplus and removed, with the exclusion of Elliott Knob and Reddish Knob.” With improvements in technology, it seems natural to remove old methods; however, fire towers are much different. This difference lies in the fact that fire towers can go out of use for their original purpose, but they still offer a beautiful view and landmark for the public to enjoy for years to come and represent an important era in our national forests. Due to interest from the public, Frankel, and many Forest Service workers, a justification for the exclusion of High Knob from destruction was submitted just a week after Anhold’s notice.

District Ranger Ray Mason wrote to Anhold on September 5th, 1972 requesting that the Forest Service retain High Knob tower. Mason explained that the fire tower “would make a good
visitor lookout… and has excellent views.” He briefly mentioned the historical significance because of the veterans who helped build it. Mason goes on to say that the “local VFW and Rockingham Historical Society have expressed interest in its retention.” After Frankel's letter, the VFW had continuously submitted more in support of preserving the tower. Due to its acceptance as a public landmark, the fire tower required maintenance to ensure its safety and accessibility for visitors to enjoy.

The decision to restore High Knob Fire Tower was not taken lightly. For restoration projects like this one, it is vital to maintain the original aesthetic while repairing and improving the structure. Along with the structure of the tower, it is important to acknowledge just how impressive the views from its catwalk are. The 360-degree visibility of High Knob Fire Tower includes:

- To the North:
  - The Northern third of Shenandoah Mountain
  - Cow Knob – About 10 miles away, another fire tower used to stand here.
  - Clearings and Meadows – These were developed by private sportsmen groups as wildlife food clearings.
  - US Highway 33.
- To the East:
  - A 30,000 acre National Forest watershed that is part of the proposed Shenandoah Mountain National Scenic Area, including Skidmore Fork and Dry River
  - Railroad Hollow – said to have been surveyed by the Chesapeake-Western Railroad as the potential location of a tunnel through the mountain. The tunnel would have been part of a route connecting Washington, D.C. to St. Louis, MO
  - Site of Liskey House – an overnight stage stop on the wagon road between Harrisonburg and Franklin, WV
  - Switzer Lake – a 100-acre water source for Harrisonburg
  - Harrisonburg, Massanutten Peak, and the Blue Ridge Mountains
- To the South:
- Open fields on private land on the crest of Shenandoah Mountain
- Reddish Knob, the highest point on Shenandoah Mountain – about 9 miles away. A fire tower stood here until 1975
- 1,400 acres of old growth forest at Skidmore Fork, which is proposed for Wilderness designation
- Radio communication station utilized by the United States Navy at Sugar Grove, WV

- To the West:
  - Brandywine Lake Recreation Area in the George Washington National Forest
  - Community of Brandywine, WV
  - The Allegheny Front mountain formation and Spruce Knob, highest point in West Virginia

The views from High Knob along with its actual structure set it apart from the steel towers of the area and make it especially alluring. A past forest archaeologist by the name of Lee Certain stated, “This tower is unique because it is the only stone tower in the state and the only one intact on National Forest lands east of the Mississippi River.” The uniqueness of the tower was a major contributor to it being put on the registry. Not only did Certain understand its importance, many others also did like Bud Risner, former Dry River District Ranger, and Gerard Jacques, former forest fire and lands staff officer. These two men were responsible for nominating High Knob Tower for the National Historic Lookout Register.
According to Jacques, “[These towers] are a symbol of conservation,” so it is only natural to protect them. Despite not being used as a fire tower anymore, High Knob Tower is still a beautiful landmark that is open to the public with the help of the restoration project and continued maintenance by the Forest Service.

The project came into discussion in December 1996 with an excess of $50,000 in the state's superfund. Restoration of High Knob Fire Tower was just one of many ideas of how to use the money. Some other ideas included creating a wildlife clearing at Bald Run, arch crossing at Slate Lick, extending Hog Pen Disabled Hunter Access Rd., adding a pistol range at Brandywine Shooting Range, improving public access at Skidmore Lake, and dredging to the boat launch at Elkhorn Lake. The idea to restore the tower grew in popularity, and the excess in the superfund was allotted to this cause.
The actual cost of the restoration of High Knob was multi-faceted. In the initial planning, the Dry River Ranger District project leaders, Terry Slater, District Fire Staff Officer, and Bob Tennyson, District Recreation Staff Officer, set out these project goals:

1.) To restore High Knob Fire Tower to its original condition, making it safe for public enjoyment, and, usable for fire detection on days of extreme fire danger, and

2.) To provide parking and access by way of a hiking trail of relatively easy difficulty to this historic landmark. The tower is currently unsafe for use by visitors; access is by way of a very difficult three-mile hike from Brandywine recreation area, an elevation difference of over 2000’.

The approximated cost of each repair job for the tower was:

<table>
<thead>
<tr>
<th>Job</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Replace door and frame at base</td>
<td>$2,000</td>
</tr>
<tr>
<td>Clean and seal all stone work</td>
<td>$15,000</td>
</tr>
<tr>
<td>Replace the mullions (members that hold up the roof)</td>
<td>$8,000</td>
</tr>
<tr>
<td>Replace and treat deck and stairs</td>
<td>$12,000</td>
</tr>
<tr>
<td>Cut out, restore overlook</td>
<td>$2,000</td>
</tr>
<tr>
<td>Interpretive signing</td>
<td>$500</td>
</tr>
<tr>
<td>Grand total for restoring the fire tower cab</td>
<td>$39,500</td>
</tr>
</tbody>
</table>

There was also additional cost to add parking and to clear out a trail for High Knob. The overall grand total for the entire project was about $139,500. This project could not have been completed without the help of local community partners. Some of the partners in this project were:
• State Historic Preservation Offices, VA & WV
• Mr. Lee Certain, Archeologist
• James Madison University fraternities and sororities
• West Virginia Department of Transportation

The original goal was to have the project completed by September 30th, 2000; however, building did not begin until 2001, and in 2003, the tower was fully restored.

Unfortunately, a common issue with historical sites, natural trails, and any other public land area is the susceptibility to vandalism. Specifically, there was a letter written by an unknown source that described Reddish Knob’s role in fire tower use and subsequent struggles with vandalism. This letter was in response to the abuse that caused its removal in 1975.

Dale Smith, a person who held Reddish Knob close to his heart, visited that fire tower throughout his entire life. When Dale was just a toddler, his father would bring him to the top of this tower, which conjures many fond memories of this landmark. To see it vandalized, for Dale, “[brought] out emotions of many years.” Because this crime felt so personal to a local who had grown up with the tower, Dale and his friends paid the government $400 to dismantle it themselves. They had planned to relocate the structure, but did not want to open it back up to the public because “They had their chance and they blew it.”

This story of the Reddish Knob Tower's dismantlement is not the only of its kind when it comes to fire towers. High Knob continuously undergoes vandalism from broken windows, smashed in doors, broken pieces of wood and hand rails, and so much more. The Forest Service does its best to continue fixing and replacing certain parts of the tower, but this constant repair may not remain tolerable for years to come.

Maintenance of the tower is an important part of local conservation efforts. With very few remaining fire towers in the Eastern United States, and even fewer made of stone, High Knob plays
an important role in the narrative of firefighting history. It also showcases the construction efforts that provided employment to war veterans and those affected by the Great Depression during the early 20th century.

Carol Maureen DeHart, a former firefighter and Shenandoah Valley historian, has worked to preserve the past of these structures. "I started interviewing for James Madison University Libraries, and since I worked with the Forest Service, I often interviewed firefighters. I really wanted to find out about the towers," said DeHart. The interviews led her to Gerald Fawley, who was over 80 years old at the time, and his experience at High Knob. "I fell in love with that tower. I've seen a lot of them, and that one is just so beautiful in particular," said DeHart. While she never worked as a lookout in the East, DeHart manned a tower in Arizona, and she described the solitude of the structures as a special feeling. "It had a magnificent view. You could see the Grand Canyon. Then on some days, it felt like a terrarium. I couldn't see past the windows. It was a very haunting feeling, but it was never lonely," said DeHart. DeHart hopes that her work will encourage conservation efforts like the one that preserved High Knob after it went out of use.

Although new technology has eliminated the necessity to man fire towers around Shenandoah Mountain, High Knob remains an important part of local culture and recreation. Hikers from near and far frequent the trail, which additionally connects to a viewpoint and public use campgrounds at Brandywine. The tower's catwalk is accessible to visitors and offers a 360-degree view of both Virginia and West Virginia. National Geographic featured this popular hike on the cover of "Staunton/Shenandoah Mountain Trails Illustrated Map 791."
To access the three mile out-and-back trail to High Knob Fire Tower from Harrisonburg, head 22 miles west on Rt. 33 into the George Washington National Forest. Park at the lot on the left just beyond the crest of Shenandoah Mountain, about a mile past Switzer Lake. From the trailhead near the kiosk in the parking lot, follow Shenandoah Mountain Trail south for .8 mile to the junction with High Knob Trail. Turn left on High Knob Trail and hike .2 mile to a forest road. Turn right on the road and walk .1 mile. Turn left to continue on High Knob Trail for .3 mile to the tower. Stay on the yellow-blazed trail and avoid trespassing on private land. When you reach the tower where Gerald Fawley lived and worked from 1940-41, linger for a while, encased in the history and natural heritage of Shenandoah Mountain.
